Abstract:

Marxism is particularly concerned with the struggles of lower and middle-class workers, social class conflicts and economic inequalities. The theory is also about the pursuit of the proletariat and their reprimand by the bourgeoisie. To determine the value of Marxism as a political theory political science in the twenty-first century, one must first establish what Marxism really is and then ask why it has apparently failed. This paper will try to tie certain modern applications in the sense of Marxism to a general theoretical framework where the relevance of Marx's ideas will be explained. Furthermore, this research paper would argue that Marxist social theory forms an important element in solving today's problems; Although some aspects seem old. Finally, this research paper concludes that although communism has failed to be applied in real life, it still provides important principles and ideas for every political and social system. Marx's ideas are, in fact, still relevant today; However, not in the sense that there is room for practical application of communism, but rather that Marx's proposals for justice and equality should be applied to the betterment of existing society.

KEYWORD : communism , proletariat , bourgeoisie , economic inequalities , Marxism
